Personal Profile

Computer Science undergraduate at the University of Colombo School of Computing (UCSC) with strong foundation in Data Structures, Algorithms, and Backend Development. Hands-on experience building distributed middleware systems and full-stack web applications using FastAPI, Docker, MySQL, and RabbitMQ. Passionate about system design, scalable architectures, and continuous learning. Seeking a Software Engineering Internship to apply technical knowledge in real-world projects.

Education

University of Colombo School of Computing (UCSC), Sri Lanka Bachelor of Science in Computer Science Current GPA: 3.55	May 2024 – Present
V/Rambaikulam Girls' Maha Vidyalayam, Vavuniya, Sri Lanka AAB (Combined Mathematics, Physics, Chemistry) Z-score: 1.8869	Jan 2010 – Feb 2023

Projects

SwiftLogistics FastAPI, Docker, PostgreSQL, RabbitMQ, WebSockets SwiftLogistics is a distributed middleware platform designed to simulate real-world logistics order processing between CMS, ROS, and WMS systems. The system implements secure JWT-based authentication, asynchronous message handling using RabbitMQ, and a retry mechanism with Dead Letter Queue (DLQ) for fault tolerance. Real-time order status tracking is enabled through WebSockets, and the entire multi-service architecture is containerized using Docker Compose for scalable deployment. Repository: https://github.com/Thanu-Venu/SwiftLogistics_Middleware	2026
Mini Compiler (C) C, Lexical Analysis, Parsing Developed a mini compiler in C implementing lexical analysis (tokenization) and basic parsing to validate program structure. Built core compiler components such as lexeme handling and syntax checking to simulate essential compilation stages and strengthen low-level systems programming skills. Repository: https://github.com/Thanu-Venu/mini-compiler-c	2025
SmartCare HTML, CSS, JavaScript, PHP, MySQL SmartCare is a web-based service management platform developed to manage caretakers, clients, and administrative operations efficiently. The system includes role-based authentication, caretaker selection with service filtering, scheduling management, leave tracking, and service history recording. The application is supported by a normalized relational database design implemented using MySQL. Repository: https://github.com/Thanu-Venu/caretaker-management-system	2025 – Ongoing
Weather App HTML, CSS, JavaScript The Weather App is a responsive web application that provides real-time weather information based on user input. It integrates external weather APIs to fetch live data and dynamically updates the user interface accordingly. The application emphasizes clean UI design, input validation, and cross-device compatibility. Repository: https://github.com/Thanu-Venu/weather_App	2024

Certifications

- Web Design for Beginners – University of Moratuwa (Online)
- HackerRank Certifications (Problem Solving & Programming)

Skills

Languages:	C, C++, Python, JavaScript, PHP, TypeScript, SQL, HTML, CSS
Frameworks/Libraries:	React, Node
Databases:	MySQL, PostgreSQL
APIs/SDKs:	Google Maps Platform, REST APIs
Tools & Platforms:	Docker, Git & GitHub, Linux (WSL), RabbitMQ, VS Code, Figma
Soft Skills:	Fast Learner, Problem Solving, Leadership, Teamwork, Communication
Interests:	Software Engineering, Project Management, DevOps Engineering
